Site and Data Reliability Engineer

Professional Experience

Reddit

DATA RELIABILITY ENGINEER IV *Nov 2024 - Present*

- Designed and implemented Data Developer Portal allowing users to find the correct data to use and how to get access to it. Reduced accidental duplication of data by 10%
- Data Lineage implementation across the warehouse, allowing for computed access grants and automatic rerunning of data pipelines after incidents
- Developed kubernetes-based controllers to manage assets within the data warehouse, eliminating terraform-related configuration drift. Reduced turnaround time for data creation by several hours.
- Worked between Security, Data Science, Machine Learning, and Infrastructure teams to build an access request policy that balanced security and developer velocity requirements

SITE RELIABILITY ENGINEER IV, DATA ENGINEERING *Sep 2022 - Nov 2024*

- Automated migration from DynamoDB to Cassandra, reducing latency and costs
- Managed Airflow deployments for multiple teams, including transition from EC2 to Kubernetes based workers, running several thousand concurrent tasks across multiple airflow clusters
- Defined SLOs for Airflow infrastructure, and worked with engineers across the org to ensure their DAGs were resilient to infrastructure outages.
- Ran Global Incident Response, along with trainings and postmortems, for most Reddit incidents

SITE RELIABILITY ENGINEER III *May 2021 - Sep 2022*

- Cleaned up stale cloud resources, roles, and datasets to reduce configuration drift, lower operational risk, and keep infrastructure ownership clear.
- Improved service reliability by adding and refining recording rules, metrics, and other observability primitives used for incident detection and debugging.
- Tightened IAM and Terraform-managed boundaries around shared infrastructure so teams could operate their own resources with less manual intervention.
- Built and maintained internal tooling and runbooks to make on-call response, access management, and platform operations more repeatable and auditable.

Coffee Meets Bagel

SENIOR SOFTWARE ENGINEER *Nov 2019 - May 2021*

- Created and led SRE team. Performed weekly performance and reliability reviews and implemented fixes to improve site status
- Lead cross-platform team to improve the resilience of CMB's user-to-user chat experience. Supported 10,000 active connections during infrastructure upgrades with no downtime
- Implemented infrastructure to support client development of user-to-user video chats as part of our Covid-19 response
- Rebuilt Jenkins CI pipeline for monolithic repository, stabilizing deploys, freeing up hours of developer time per day, and dropping minimum time to recovery from 45 minutes to 1 minute
- Planned and hosted BagelCon, the internal Coffee Meets Bagel developer conference, with 24 speakers and a BattleBot competition
- Mentored junior engineers and assisted with the CMB internship program

SurveyMonkey

SOFTWARE ENGINEER IV, MESSAGING TEAM LEAD *Mar 2018 - Nov 2019*

- Maintained and updated a Hashicorp Consul cluster spanning eight datacenters
- Maintained multiple RabbitMQ clusters handling thousands of messages per second
- Implemented a Kafka cluster capable of routing tens of thousands of messages per second, and planned and performed a migration from RabbitMQ to Kafka
- Researched and implemented the 'next generation of caching', involving a custom caching library with support for connection pooling and a new TWEMProxy installation
- Worked with engineering teams to profile and optimize the performance of their applications
- Worked as lead engineering mentor for the internship program, consisting of 25 engineering interns across multiple teams

SOFTWARE ENGINEER III, SRE *Jan 2017 - Mar 2018*

- Implemented and maintained core routing infrastructure for all of SurveyMonkey's web traffic in both NGINX+ and F5
- Worked with Security and Engineering to define and implement development and deployment processes to meet PCI requirements
- Assisted in buildout of docker and ansible based automated deployment system with support for multiple datacenters
- Team Lead for the infrastructure components of building out, and failing over to, a new datacenter

SOFTWARE ENGINEER I/II, USER IDENTITY *Aug 2015 - Jan 2017*

- Implemented and maintained the development stack used across the engineering organization
- Implemented features across the application stack, ranging from MSSQL stored procedures to Python and React based applications

Microsoft

SOFTWARE DEVELOPMENT ENGINEER INTERN *Summer 2014*

- Created an API in Sharepoint's Client Side Object Model to enable manipulation of files and folders from both C# and Javascript
- Built a modular file tree control in Javascript with support for asynchronous data loading
- Gained experience working within a large codebase and complex build system

Tufts University

TEACHING FELLOW, CO-INSTRUCTOR: WEB ENGINEERING *2012-2015*

- Authored curriculum to teach fundamental web engineering to undergraduate students
- Graded projects and ran office hours for courses ranging from 50 to 300 students
- Supervised a team of 5 teaching assistants

Education

Tufts University

B.S. IN COMPUTER SCIENCE, MINOR IN ENTREPRENEURIAL LEADERSHIP *2011-2015*
